

TECTROL[®]

**FLAME FAILURE SHUT-DOWN
MODEL 6001**

TECTROL'S Flame Failure Shut-Down (FFSD) is a component that is used for the safety element on equipment that is gas fired. The device is arranged in the piping of the fuel system in such a manner as to help eliminate the possible explosion factor if the unit should lose its pilot flame. It is a safety guard on the system.

You should refer to the installation drawing for TECTROL's suggested method of installation.

NORMAL INSTALLATION OF MODEL 6001:

TECTROL'S Model 6001 FFSD accomplishes the safety protection of your equipment in a weather protected housing. Our unit has been accepted for the protection of gas fired units around the world.

CAUTION: REMOVE ALL PRESSURE FROM THE SUPPLY LINES BEFORE ATTEMPTING TO WORK ON THIS UNIT. IF WORK IS TO BE PERFORMED ON THE UNIT, CAUTION SHOULD BE USED IF A HAZARDOUS MATERIAL (H₂S OR CO₂) IS USED TO FIRE THE UNIT.
